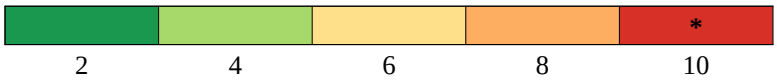
WC Model Loss Ratio Bin and Technical Premiums: Score with full (3-yr) claim history



Interpretation: Prospective term predicted loss ratios of policies in bin 10 are typically 25% higher than average.

	Exp Mod	On-level Manual Prem
Current	1.51	$11,067
Technical	1.89	$12,919

WC model loss cost allocation:

The predicted indemnity payment involved claim count is 0.16; The predicted payment for each indemnity payment involved claim is $9,100, where the predicted indemnity payment is $4,164 and the predicted medical payment is $4,936.

The predicted medical payment only claim count is 0.43; The predicted payment for each medical payment only claim is $611.

Top 5 Model Predictors Attributed to High Projected Loss Ratio For This Policy

1. Count of all claims during past 3 years and normalized to policy total loss cost is high.
2. The workers compensation hazard index is high according to the AM Best.
3. The governing class code hazard grade is E.
4. Total payroll at governing state to total policy payroll is high.
5. 2011 Income: household average (mean) household income is low in ZIP5 area.
